Wax is well-known for its characteristic of being water-repellent. This is why our POLARIS and CRISTAL panelling, which is treated on all sides, is excellently suited for use in damp rooms. And it goes without saying that Mother's doubts with regard to cleaning problems can be simply brushed aside. But that is just part of good form.

Water-repellent

Our designer panelling, which is made from Nordic spruce, is given its unmistakable shape on state-of-the-art wood processing plant, and is available at a very interesting price that cannot be matched by the competition.

Graceful design

Where natural homeliness, comfort and aesthetics become an experience in their own right, that is where wood is at home. This construction material, which has stood the test of time over centuries and is used throughout

Homely

the whole world, impresses again and again with its outstanding characteristics. Its high insulation value and its humidity-regulating capability ensure a balanced and pleasant room climate at all times. As a genuine natural product, wood demonstrates many constructional advantages and, in addition, causes no disposal problems. Not forgetting the countless possibilities for conjuring up the right atmosphere in any room with wood. From rustic, through traditional and up to really cheeky. Or with our successful POLARIS and CRISTAL designer panelling - really the most modern and ecological way to live with wood.

Better living with wood

For anyone who wishes to allow himself absolute freedom with regard to furniture, but who is not satisfied with traditional ceilings and walls from the very outset, our designer panelling is probably the best choice.

Ultra modern

The white POLARIS and the natural CRISTAL speak a simple and unobtrusive language. Their light and open surface effect is due to our special waxing procedure, which helps the wooden surface to achieve a typical, silk gloss and semi-transparent finish, even in the knot areas. A procedure which, naturally, is also excellent in environmental terms.

Because we start thinking in an environmentally friendly manner in the development stage, our products can be used on any wall without any problem.

Environmentally friendly

Our POLARIS and CRISTAL designer panelling is treated with an open-pore coating based on natural wax. This not only benefits environment, but also your immediate surroundings. Because, according to BAG and EN 71, the standard for the safety of children's toys, our designer panelling is completely harmless to health, and is resistant to sweat and saliva in accordance with DIN 53160. Even the sun cannot bring anything else to the light of day.

Light can have practically no effect at all on our white POLARIS panelling. This has, incidentally, also been proved by official testing. After 1200 hours of UV radiation, only a „light discoloration of the basic wood, but not of the paint coat“ was detected. Sunlight therefore only brings our competitors problems.

UV-resistant
